

Brian Moore

A 90's alumnus of the SPAC department, Brian Moore returned to Rice to do post-doctoral work after receiving a PhD from Arizona State U. under the guidance of another Rice alumnus Jeff Hester. After limited success in that arena, Brian was hired as support staff for Dr. Patricia Reiff, working primarily on her outreach projects. His crowning achievement in that capacity was cobbling together the Frankencode that shows the current space weather conditions, which serves as the basis of its current functionality.

Brian retired from his staff position after receiving a boatload of moolah from the fine folks at Jeopardy. He now resides in Salt Lake City, and spends most of his time making life difficult for fellow SPAC alumna Karen Klamczynski (MS '97).
